

MARCUS LIBUTAN

Irvine, CA • (206) 335-9993 • tmlibutan@gmail.com • [tmlibutan.github.io](https://github.com/tmlibutan)

Driven infrastructure professional with a focus on automation, hybrid cloud management, and enterprise security. Experienced in patching, monitoring, and disaster recovery across AWS and on-prem environments, with a strong track record in high-availability systems, compliance, and cross-team coordination.

EXPERIENCE

Lead Operations Engineer | *Rimrock Capital Management*, Irvine, CA January 2025 – Present

- Created an internal infrastructure bot leveraging AI tools to reduce manual workloads and improve operational efficiency.
- Managed hybrid cloud infrastructure using AWS and Hyper-V, overseeing EC2 instances, VPC configurations, NACLs, and CloudWatch to optimize scalability and performance.
- Modernized VPN services by deploying OpenVPN integrated with AWS resources, improving secure remote access reliability and reducing on-prem infrastructure dependencies.
- Automated system patching using WSUS (Windows), Ansible (Linux), and Nessus (vulnerability scanning), boosting compliance and minimizing downtime.
- Administered Druva-based backup operations, conducting routine restore validations to uphold disaster recovery standards.
- Enforced endpoint protection and compliance via Absolute (asset tracking) and Bitdefender (AV/EDR).

IT Operations Engineer | *Rimrock Capital Management*, Irvine, CA March 2023 – January 2025

- Led migration of on-prem servers to AWS, reducing EC2 spend by 25% and improving system performance.
- Rebuilt virtualization environment by moving critical workloads from vSphere ESXi to Hyper-V, enhancing performance and reducing licensing costs.
- Upgraded legacy Windows/Linux systems and integrated monitoring tools to improve system visibility and reduce MTTR.
- Managed Active Directory: configured OUs, GPOs, and Domain Controllers to support centralized identity and policy enforcement.
- Worked with vendors to define technical requirements and deploy infrastructure upgrades with minimal user disruption.

Product Support Engineer Intern | *Linksys*, Irvine, CA May 2022 - August 2022

- Triaged escalated firmware/hardware support cases, collaborating with L2/L3 support, QA, and engineering teams.
- Resolved over 100 open customer cases through in-depth research, troubleshooting, and timely solutions.
- Documented bugs in JIRA and tracked support trends in Salesforce to support faster case resolution.
- Presented firmware trend analysis to product managers, influencing future development priorities.

EDUCATION

Bachelor of Science in Computer Information Systems

California State Polytechnic University, Pomona, CA

- Concentration: **Information Security and Forensics**
- Relevant Coursework: Telecommunication Networks, IT Infrastructure, Contemporary Operating Systems, Object-Oriented Programming, Network Security, Information Security, Computer Forensics

SKILLS & OTHER

Technical Skills: Network Troubleshooting, VPN Setup, Server Virtualization, Cloud Computing, Active Directory, IAM/GPO, Security Patching, End-User Support

Tools & Platforms: AWS, Hyper-V, WSUS, Ansible, Druva, Bitdefender, WatchGuard, Salesforce Lightning, JIRA, Nessus, KnowBe4, Absolute, Cursor AI

Certifications: DataCamp; Intermediate Python (October 2022) DataCamp; Introduction to SQL (October 2022), Advanced Google Analytics (March 2022), Microsoft Office Specialist (June 2017)
